My name is Fran Talan, and I am currently a third-year student pursuing my degree in Electrical Engineering and Computing. I am writing to express my sincere interest in the Backend Developer position at Productive. I am enthusiastic about the prospect of contributing my skills and energy to your dynamic team.

Currently, I am employed as a Full Stack Developer at AniBiome, a startup that has provided me with valuable experience in both backend and frontend development. For backend functionalities, I leverage JavaScript, and for the frontend, I work with JavaScript, Liquid, and CSS to enhance the user experience on our webstore at anibiome.ai. In my current role, I am entrusted with crafting and implementing innovative solutions that align with the company's overarching vision.

In my previous position at Mindsmiths, I served as a Software Developer, specializing in backend development using Java and Python for API calls and third-party application integration. A key aspect of my responsibilities included the development of reusable components in Vue.js, contributing significantly to the success of our microservices architecture.

Currently, alongside my professional responsibilities, I am engaged in projects utilizing SpringBoot and React, as well as .NET on another endeavor. These projects exemplify my ongoing commitment to exploring new challenges and expanding my skill set.

The opportunity at Productive excites me for its cutting-edge technologies and the prospect of collaborating with a team of inspiring individuals who share a passion for innovation.

Thank you for considering my application. I look forward to the possibility of discussing how my skills and experiences align with the needs of your team. I am eager to contribute to the success of Productive.
